* sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads * and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. * However, it should not be assumed that this clone * will be sequenced to completion. In the event that the record is updated, the accession number will be preserved.
Research, 320 Charles Street, Cambridge, MA 02141, USA All repeats were identified using RepeatMasker: Smit, A.F.A. & Green, P. (1996-1997) http://ftp.genome.washington.edu/RM/RepeatMasker.html
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                2 100 bp

Gaps between the contign are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

**NOTE: This record contains 81 individual **sequencing reads that have not been assembled into **contigs. Runs of N are used to separate the reads **and the order in which they appear is completely ** arbitrary. Low-pass sequence sampling is useful for **identifying clones that may be gene-rich and allows **overlap relationships among clones to be deduced. **However, it should not be assumed that this clone ** will be sequenced to completion. In the event that the record is updated, the accession number will	1 809: contig of 809 bp in length 0 909: gap of 100 bp 1718: contig of 809 bp in length 9 1818: gap of 100 bp 2655: contig of 817 bp in length 6 2735: gap of 100 bp 16 3541: contig of 806 bp in length	3641: gap of 100 bp 440: contig of 789 bp in length 4510: gap of 100 bp 1 5317: contig of 787 bp in length 8 5417: gap of 100 bp 6230: contig of 813 bp in length 1 713: contig of 813 bp in length 7215: gap of 100 bp 7225: gap of 100 bp 6 8055: contig of 820 bp in length 6 8155: gap of 100 bp 6 8055: contig of 820 bp in length 6 8155: gap of 100 bp 7225: gap of 100 bp	ni ga ga ga ni ni ga ga ga ni ni ga ga ga ga ga ga ga ni ni ga ga ni ni ga ni ni ga	20	by 337 by in

(Gon, Unknown Chimp). Common names: Pan troglodytes verus is the western chimp and Pan troglodytes troglodytes is the central chimp. To be included in chimpanize SNP discovery, a read must have phred calls must have Phred score >= 20, at least 500bp in length, at least 50% of its base occident and the read have Phred score >= 20, at least 30% of its base calls must satisfy SNQS(30,25) (single strand NQS, the base in question has Phred score >= 30, the surrounding 10 bases in the read have Phred score >= 25), and the read must have at least 200 bp SNQS(30,25) bases. Reads not uniquely placed in the genome and read pairs whose two ends were not consistently placed were discarded. After above filtering, NQS(30,25) standard was applied to all pairs of a score in the placed were
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

Alignments (between two reads) with less than 100 NQS bases or with SNP rate > 0.01 were discarded. To exclude alignment between two copies of a single read, comparisons between two reads that share 95% of their genome alignments (>=95% bases of read A and >=95% bases of read B were placed at the same locus placed at the same locus of human genome) were discarded.
                                                                                                                                      troglodytes verus), 3 other Pan troglodytes verus chimps (Donald, Karlien, Yvonne), 3 Pan troglodytes troglodytes chimps (Noemie, Masuku, Clara) and 2 chimps
23,021,928 chimpanzee whole genome shotgun reads were aligned to the Human genome NCBI
Build 34 (hg16,July 2003). Chimp WGS reads were from 9 donors, including Clint (Pan
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  0; Gaps

On Jun 28, 2005 this sequence version replaced gi:58531381.
The sequence in this assembly is a combination of BAC based reads and whole genome shockpun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rads). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-seaffold'). Within each contig-seaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence contigs will be indicated in the feature NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank\_draft\_data.html).
NOTE: This is a "working draft' sequence. It currently consists of 19 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will Quality coverage: 7x in Q20 bases; sum-of-contigs estimation Assembly program. Submitted (12-JAN-2005) Genome Sequencing Center, 4444 Forest Park
Parkway, St. Louis, MO 63108, USA
On Dec 30, 2004 this sequence version replaced gi:28894649.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             NOTE: This is a 'working draft' sequence. It currently consists of 9 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                       Center: Washington University Genome Sequencing Center

Direct Submitted (19-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
The Sequence in this assembly is a combination of BAC based reads and whole genome shorgun sequencing reads assembled using Atlas and whole genome shorgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.rea.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ms to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome

* Consists of 3 contigs. The true order of the pieces

* is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               139431: contig of 139431 bp in length 139531: gap of unknown length 205030: contig of 65499 bp in length 228824: contig of 23694 bp in length.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Web site: http://www.hgsc.bcm.tmc.edu/

Baylor Plaza, Houston, TX 77030, USA.

On Nov 19, 2002 this sequence version replaced gi:23265864.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.ed/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a "working draft" sequence. It currently consists of 2 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                      Submitted (05-MAR-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA 3 (Dases 1 to 244504) Rat Genome Sequencing Consortium.

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 235052: contig of 235052 bp in length 235053 235152: gap of unknown length 235153 244504: contig of 9352 bp in length. Direct Submission

Submitted (13-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Nov 13, 2002 this sequence version replaced gi:23664539.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Mithin each contig-scaffold') individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the serimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html) NOTE: This sequence may represent more than one clone.

NOTE: This is a 'working draft' sequence. It currently consists of 6 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Center: Baylor College of Medicine

sample comprising: contacting the sample with a mutant analyte-binding enzyme which has binding affinity for the analyte or an immediate analyte enzymatic conversion product but has attenuated catalytic activity; and detecting resulting binding. The method is useful in monitoring biological systems/processes, or prognosis/diagnosis of disease caused by imbalances of the analytes. The present sequence is a coding sequence used in the present invention. Note: the present sequence is not shown in the specification, but was from Genbank, using information given in the secification		2 GTCACCTGTGGAGAGCACGTCTTCTGCGGGCCCTCTGCGGAAGAGAGAG	62 ACATGTCACCGGGGTCCAAGACCTGTCGCAACCCGAAGGTCTGAAAAAACCCTGCGGG 121 	122 ATGAGATCAATGCCATTCTGCAGAAGAGGATTATGGTGCTGGAATGGGGATGGGGACCA 181 	182 TGATCCAGCGGAGAAGCTAAACGAAGAACATTCCGAGGTCAGGAATTTAAAGATCATG 241 	242 CCAGGCCGCTGAAAGGCAACAATGACATTTTAAGTATAACTCAGCCTGATGTCATTTACC 301 	302 AAATCCATAAGGAATACTTGCTGGCTGGGGGGAGATATCATTGAAACAAATACTTTTAGCA 361 	362 GCACTAGTATTGCCCAAGCTGACTATGGCCTTGAACACTTGGCCTACCGGATGAACATGT 421		GCTCTCCAGGGGTGGCCAGAAAGCTGCCGAGGAAGGTAACTCTCCAGACAGA			AAAGGCCGGATTATAGGAACATCACATTTGATGACTTGTTGAAGCATACCAAGAGCAGG			662 CCAATGCCAAGGCGCTTGTTTGCACTCCAAAATCTTTTTGAGGAGAAAATATGCTCCC 721	882	722 GGCCIATCTITATITCAGGGACGATCGTTGATAAAAGTGGGCGGACTCTITCCGGACAGA 781	945	1005 CAGGAGAGAGATTGTCATCAGGGTGTCTCATGGAGAACCACTCTACATTGGATTAAATT 1064	842 GIGCTTIGGGIGCAGCTGAGAIGAGACCTTTIATIGAAATAATIGGAAAAIGTACAACAG 901

```
The present invention provides a novel method of estimating the susceptibility of an individual to a developmental disorder using genetic and environmental variables. The method can be used in the diagnosis, prevention and treatment of disorders such as schizophrenia, spina bifida cystica, Tourette's syndrome, bipolar illness, autism, conduct disorders, attention deficit disorder, obsessive compulsive disorder, chronic multiple tic syndrome and learning disorders such as dyslexia
                                                                                                                                                                                                                 Diagnosing a developmental disorder, e.g. schizophrenia, by forming datasets (DS) of genetic (e.g. genotypes of folate metabolism alleles) and environmental variables affecting an individual and then comparing

The present invention relates to a method (M1) for estimating the susceptibility of an individual to have offspring that develop a susceptibility of an individual to have offspring that develop a and/or proteins from the biological sample, where analyzing the nucleic acids and/or proteins from the biological sample, where analyzing results in a partial or full genotype for the alleles of two or more genes involved in folace, pyridoxine, and/or cobalamin metabolism. The present sequence is one such gene involved in folace metabolism. The method is also useful for diagnosing, preventing, and treating developmental disorders, e.g. eshizophrenia, autism, attention deficit hyperactivity disorder, or obsessive-compulsive disorder. The protein encoded by the present sequence is also known as 5-methyltetrahydrofolate-homocysteine S-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          285 ACATGTCACCCGCGCTCCAAGACCTGTCGCAACCCCGAAGGTCTGAAGAAAACCCTGCGGG 344

                                                                                                                                                                                                                                                                                                                                                     4064
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a method for assaying an analyte in a sample comprising: contacting the sample with a mutant analyte-binding enzyme which has binding affinity for the analyte or an immediate analyte enzymatic conversion product but has attenuated catalytic activity; and detecting resulting binding. The method is useful in monitoring biological systems/processes, or prognosis/diagnosis of disease caused by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Assaying method, useful for prognosis and diagnosis of disease, comprises contacting sample with a mutant analyte-binding enzyme and detecting binding.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes a novel method for the fermentative production of methionine by growing a sulphur-producing Coryneform bacteria that expresses at least one heterologous nucleic acid encoding a protein with methionine synthase (MetH) activity. Methionine accumulates in the medium or the cells. The method can be used to produce an L-methionine cor the containing animal feed additive by culturing an L-Met-producing microorganism, removing water from the resulting broth, removing 0-100% of the biomass formed and drying the product to produce the feed additive by containing an L-Met-producing methodory less than 100% with respect to the meth coding sequence of corynebacterium glutamicum ATCC 1302. Optionally at least one other gene in the methionine biosynthesis pathway (e.g. aspartate kinase, corynebacterium sultated so that it is not affected by metabolites. Also at least one metabolic pathway that reduces production of methionine is at least partly switched off (e.g. homoserine kinase, threonine is chydratase or threonine synthase). The method in himsen and ditive for animal feeds. More spending land in the change of the containing fine changing are useful in human and additive and any animal mithing and additive are useful in human and and animal animal animal animal and animal animal and animal animal and animal and animal                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ATGTCACCCGCGCTCCAAGACCTGTCGCAACCCGAAGGTCTGAAGAAACCCTGCGGGAT 123

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This cDNA clone encodes human wild-type methionine synthase (see AAW6594). A survey of the NCB1 databases yielded several sequences corresponding to methionine synthases from different organisms.

Corresponding to methionine synthases from different organisms.

Comparison of these sequences generated 4 very conserved regions.

Degenerate oligonucleotides (see AAV34064-104) based on these conserved sequences were used as primers for RT-PCR with human and mouse mRNA. PCR products were subcloned, sequenced and aligned. Additional sequences were subcloned by further PCR and inverse PCR. The full-length sequence encodes a 1265-amino acid protein of predicted mol.wt. 141 kDa. Using FISH, the gene was mapped to human chromosome band 1943; Mutations in this gene are associated with hyperhomocysteinaemia. One missense mutation (2758 C to G) and a 3 bp deletion (2640-42) have been identified in patients of the cbiG complementation group. A polymorphism (2756 A to G) has also been detected. The invention relates to the diagnosis and threatent to patients at risk for methionine synthase deficiency, and associated altered risk for neural tube defects, cardiovascular disease, and colon cancer. Methods for detecting sequence variants for methionine

```
This invention relates to novel, isolated full length human cDNA molecules and the encoded proteins thereof. Specifically, it refers to cDNA clones obtained by an oligo-capping method, where none of these clones are identical to any known human mkNAs. The present invention describes an immunoassay to identify agonists and antagonists, as well as antibodies, antisense molecules and siRNAs that can all be used to bind to and modulate expression of the CDNA molecules. As such, these molecules are useful for diagnostic markers or therapeutic targets for the various disease or morbid states. In particular, they are useful in gene therapy for treating osteoporosis, neurological disease, Alzheimer's disease, Perkinson's disease, dementia, short memory and various cancers,
                                                                                                                                                                                                 New 1995 cDNA, useful for treating osteoporosis, neurological diseases, Alzheimer's diseases, Parkinson's diseases, dementia and various cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               for treating emotional reaction, fear response and panic. Accordingly, they exhibit osteopathic, neuroprotective, nootropic, antiparkinsonian, eytostatic and tranquiliser activities. This polynucleotide is a full length human cDNA sequence of the invention. NOTE: This sequence is not given in the sequence listing of the specification but can be obtained or

The present sequence represents an expressed sequence tag (EST), and is a polynucleotide of the invention. The polynucleotides of the invention are all secreted EST sequences isolated from a variety of human tissue sources. The EST sequences and proteins encoded by them are predicted to have useful biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, tissue growth activity, activity, haemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, cacherin/thabin activity, receptor/ligand activity, anti-inflammatory activity, adherentin/tumour invasion suppressor activity, tumour inhibition activity. The EST sequences are also stated to be useful for gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        2811 TAGACAGGACCATTATGAGTCTCTCAAGGAGAGAGATACTTACCCTTAAGTCAAGCCAG 2870

The invention relates to a novel oligomucleotide array comprising a number of oligomucleotides derived from an orthologue gene of a different organism or species immobilised on a support body. The oligomucleotide array has two sides comprising a gene derived from two different corganisms, in which one side comprises a human gene. In the oligomucleotide array a base sequence differs in a different position on the support body. Each of the oligomucleotides is a partial sequence of the organism species A and the organism species B is less than 70%. The sequence homology of the genes other than the orthologue gene of the organism species B is the level-of. The organism species A and the organism species B is less than 70%. The sequence homology of the genes other than the orthologue gene of the organism species B is the level-of. The clund value or the calculated using the homology searching algorithm: basic local alignment search tool (BLAST) and the value is 0.1 or more. The found value or the calculated value of the melting-temperature of the variant genes other than the orthologue gene of the corganisms. The melting-the organism species B is 20 degrees C or more. The oligomucleotide array is useful for measuring expression distribution of the orthologue gene in different organisms. The method is useful for medical-agent administration and for comparing change of the orthologue gene in different organisms. The oligomucleotide array has two or more types of organism semultaneously. The oligomucleotide array is the orthologue gene in different organisms. The oligomucleotide array has two or more types of organism semultaneously. The oligomucleotide array is the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Oligonucleotide array, useful for measuring ortholog gene-expression distribution, comprising number of oligonucleotides derived from ortholog gene of different organism immobilized on support.
                                                                                                                                                                                                     oligonucleotide array, orthologue, homology, expression distribution, change, gene-expression, rat, probe, ss.
                                                                                                                                                             Oligonuclectide array related rat oligonuclectide probe No 75.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Score 44; DB 12; Length 80;

```
The invention relates to the identification of nucleic acid molecules (AAI29513-AAI31314) from the human genome which include polymorphic sites which can predispose individuals to disease. Various genes from a number of individuals were resequenced and single nucleotide polymorphisms (SNPs) in these genes discovered. The method is useful for predicting the presence, absence or severity of a particular phenotype or disorder (e.g. diabetes) associated with a particular genotype. The nucleic acids containing the polymorphic sites may be useful in forensics and paternity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Revised record issued on 04-NOV-2004 : Correction to Feature Table Key

```
The invention relates to the identification of nucleic acid molecules (AA129513-AA131314) from the human genome which include polymorphic sites which can predispose individuals to disease. Various genes from a number of individuals were resequenced and single nucleotide polymorphisms (SNPs) in these genes discovered. The method is useful for predicting the presence, absence or severity of a particular phenotype or disorder (e.g. diabetes) associated with a particular genotype. The nucleic acids containing the polymorphic sites may be useful in forensics and paternity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nucleic acid molecules from the human genome which include polymorphic sites, useful in methods for predicting the presence, absence or severity of a particular phenotype or disorder (e.g. diabetes) associated with a particular genotype.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Revised record issued on 04-NOV-2004 : Correction to Feature Table Key
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human, resequence, genotype, disease, forensic, paternity testing, single nucleotide polymorphism, SNP; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to the identification of nucleic acid molecules (AAI29513-AAI31314) from the human genome which include polymorphic sites which can predispose individuals to disease. Various genes from a number of individuals were resequenced and single nucleotide polymorphisms (SNPs) in these genes discovered. The method is useful for predicting the presence, absence or severity of a particular phenotype or disorder (e.g. diabetes) associated with a particular genotype. The nucleic acids containing the polymorphic sites may be useful in forensics and paternity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nucleic acid molecules from the human genome which include polymorphic sites, useful in methods for predicting the presence, absence or severity of a particular phenotype or disorder (e.g. diabetes) associated with a particular genotype.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Revised record issued on 04-NOV-2004 : Correction to Feature Table Key

The invention relates to the identification of nucleic acid molecules (AAI29513-AAI11314) from the human genome which include polymorphic sites which can predispose individuals to disease. Various genes from a number of individuals were resequenced and single nucleotide polymorphisms (SNPs) in these genes discovered. The method is useful for predicting the presence, absence or severity of a particular phenotype or discover (e.g. diabetes) associated with a particular penotype. The nucleic acids containing the polymorphic sites may be useful in forensics and paternity
                                                                                      Nucleic acid molecules from the human genome which include polymorphic sites, useful in methods for predicting the presence, absence or severity of a particular phenotype or disorder (e.g. diabetes) associated with a particular genotype.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nucleic acid molecules from the human genome which include polymorphic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                     The invention relates to the identification of nucleic acid molecules (AAI29513-AAI31314) from the human genome which include polymorphic sites which can predispose individuals to disease. Various genes from a number of individuals were resequenced and single nucleotide polymorphisms (SNPs) in these genes discovered. The method is useful for predicting the presence or severity of a particular phenotype or discoder (e.g. diabetes) associated with a particular genotype. The nucleic acids containing the polymorphic sites may be useful in forensics and paternity

(AAI29513-AAI31314) from the human genome which include polymorphic sites which can predispose individuals to disease. Various genes from a number of individuals were resequenced and single nucleotide polymorphisms (SNPs) in these genes discovered. The method is useful for predicting the presence, absence or severity of a particular phenotype or disorder (e.g. diabetes) associated with a particular genotype. The nucleic acids containing the polymorphic sites may be useful in forensics and paternity
predicting the presence, absence or severity disorder (e.g. diabetes) associated with a

WPI; 2001-522952/57

Nucleic acid molecules from the human genome which include polymorphic sites, useful in methods for predicting the presence, absence or severity of a particular phenotype or disorder (e.g. diabetes) associated with a of a particular phen particular genotype

Claim 1; Page 61; 145pp; English

The invention relates to the identification of nucleic acid molecules

Various genes from a number of individuals were resequenced and single nucleotide polymorphisms (SNPs) in these genes discovered. The method is useful for predicting the presence, absence or severity of a particular phenotype or disorder (e.g. diabetes) associated with a particular genotype. The nucleic acids containing the polymorphic sites may be useful in forensics and paternity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to the identification of nucleic acid molecules (AAI29513-AAI31314) from the human genome which include polymorphic sites which can predispose individuals to disease. Various genes from a number of individuals were resequenced and single nucleotide polymorphisms (SNPs) in these genes discovered. The method is useful for predicting the presence, absence or severity of a particular phenotype or disorder (e.g. diabetes) associated with a particular genotype. The nucleic acids containing the polymorphic sites may be useful in forensics and paternity testing

It corresponds to nucleotides 2432-2465 of the human methionine synthase cDNA open reading frame (see AAV34064-104) based on such conserved regions are provided. These have been used for human and mouse methionine synthase cDNA cloning, chromosome mapping and in a claimed method for mutation detection. Mutations in the human methionine synthase gene are associated with hyperhomocysteinsemla. The invention relates to the diagnosis and associated altered risk for methionine synthase deficiency, and associated altered risk for methionine synthase deficiency, and associated altered risk for methion the diagnosis and calculated altered risk for methion graces, cardiovascular disease and colon cancer. Claimed methods for detecting sequence variants involve

This is the nucleotide sequence of oligonucleotide 1772, a primer based on a highly conserved region found in the methionine synthases of different organisms. It corresponds to nucleotides 2359-2384 of the human methionine synthase cDNA open reading frame (see AAV34064). 41 Primers (see AAV34064-104) based on such conserved regions are provided. These have been used for human and mouse methionine synthase cDNA cloning, chromosome mapping and in a claimed method for mutation detection. Mutations in the human methionine synthase gene are associated with hyperhomocysteinaemia. The invention relates to the diagnosis and associated altered risk for methionine synthase deficiency, and associated altered risk for methionine synthase deficiency, and cassociated altered risk for methionine synthase deficiency, and associated altered risk for methionine synthase deficiency and associated altered risk for methionine synthase deficiency and cascociated altered risk for methionine synthase deficiency and associated altered risk for methionine synthase deficiency.
                                                                                                                                                                                                                                     DNA encoding methionine synthase polypeptide - and corresponding polypeptide, cells, antibody and therapeutic methods.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Methionine synthase; human; hyperhomocysteinaemia; neural tube cardiovascular disease; colon cancer; diagnosis; therapy; PCR;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a method of determining the genetic predisposition of a subject for development of thrombosis which comprises examining at least 2 nucleic acid segments from the genome, followed by multifactorial analysis of the results. The nucleic acid segments can contain allelic polymorphisms whose presence is correlated with an increased risk of thrombosis. The method is used to detect polymorphisms, or combinations of them, associated with increased inherited risk of allelic variants when present together, and requires only a single test kit (reducing time and costs). The present sequence represents a thrombosis predisposition PCR primer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Determining genetic disposition to thrombosis, by testing for presence of at least two allelic polymorphisms associated with increased risk, followed by multifactorial analysis of the results.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Methionine synthase, human, hyperhomocysteinaemia, neural tube defect, cardiovascular disease, colon cancer, diagnosis, therapy, PCR, primer,

This is the nucleotide sequence of oligonucleotide 1796, a primer based on a highly conserved region found in the methionine synthases of different organisms. It corresponds to nucleotides 2727-2752 of the human methionine synthase cDNA open reading frame (see AAV34063). 41 Primers (see AAV34064-104) based on such conserved regions are provided. These have been used for human and mouse methionine synthase cDNA cloning, chromosome mapping and in a claimed method for mutation detection. Mutations in the human methionine synthase gene are associated with
                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                  This is the nucleotide sequence of oligonucleotide 407A, a primer based on a highly conserved region found in the methionine synthases of different organisms. It corresponds to nucleotides 151-176 of the human methionine synthase CDNA down reading frame (see AAV34063). 41 Primers (see AAV34064-104) based on such conserved regions are provided. These chromosome mapping and in a claimed methionine synthase CDNA choning, chromosome mapping and in a claimed method for mutation detection. Mutations in the human methionine synthase gene are associated with hyperthomocysteinaemia. The invention relates to the diagnosis and treatment of patients at risk for methionine synthase deficiency, and associated altered risk for methionine synthase deficiency, and associated altered risk for meutal tube defects, cardiovascular disease and colon cancer. Claimed methods for detecting sequence variants involve

This is the nucleotide sequence of oligonucleotide 1808, a primer based on a highly conserved region found in the methionine synthases of different organisms. It corresponds to nucleotides 2458-243 of the human methionine synthase cDNA open reading frame (see AAV34063). 41 Primers (see AAV34064-104) based on such conserved regions are provided. These have been used for human and mouse methionine synthase cDNA cloning, chromosome mapping and in a claimed method for mutation detection. Mutations in the human methionine synthase gene are associated with hyperhomocysteinaemia. The invention relates to the diagnosis and treatment of patients at risk for methionine synthase deficiency, and associated altered risk for neural tube defects, cardiovascular disease and colon cancer. Claimed methods for detecting sequence variants involve SSCP or RFLP polymorphism analysis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

This is the nucleotide sequence of oligonucleotide 2606B, a primer based on a highly conserved region found in the methionine synthases of different organisms. It corresponds to nucleotides 1139-1114 of the human methionine synthase cDNA open reading frame (see AAV34064). 41 Primers (see AAV34064-104) based on such conserved regions are provided. These have been used for human and mouse methionine synthase cDNA cloning, chromosome mapping and in a claimed method for mutation detection. Mutations in the human methionine synthase gene are associated with hyperhomocysteinaemia. The invention relates to the diagnosis and treatment of patients at risk for methionine synthase deficiency, and associated altered risk for methionine synthase deficiency, and associated altered risk for neutral tube defects, cardiovascular disease and colon cancer. Claimed methods for detecting sequence variants involve
                                                                                                                                                                                                                                                         Methionine synthase; human; hyperhomocysteinaemia; neural tube defect; cardiovascular disease; colon cancer; diagnosis; therapy; PCR; primer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               encoding methionine synthase polypeptide - and corresponding peptide, cells, antibody and therapeutic methods.

The invention relates to a secretory polynucleotide (designated sptm)

comprising any of 567 polynucleotide sequences (ABZ35837-ABZ36403), a

naturally occurring polynucleotide sequence at least 90 % identical to

the polynucleotide sequence, a polynucleotide complementary to them or an

Expansion of them. The polypeptide or polynucleotide are useful for

treating, preventing or diagnosing a disease or condition associated with

the expression of functional SPTW. These are particularly useful for

diagnosing, treating or preventing autoimmune/inflammatory disorders

(e.g. acquired immunodeficiency syndrome, ansemia, asthma or Crohn's

disease), neurological disorders (e.g. epilepsy, Huntington's disease,

chementia, stroke, Alzheimer's disease, Creutzfeldt-Jakob disease,

chementia, stroke, Alzheimer's disease, Creutzfeldt-Jakob disease,

chementia or ammesia), or cell proliferative disorders (e.g.

sociasis, polycythemia vera, or cancers including adenocarcinoma,

psoriasis, polycythemia vera, or cancers including adenocarcinoma,

presst, cervix or prostate). Note: The sequence data for this patent did

cont form part of the printed specification, but was obtained in electronic

format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New human secretory proteins and polynucleotides, useful for diagnosing, treating or preventing autoimmune/inflammatory disorders (e.g. AIDS), neurological disorders (e.g. Alzheimer's), or cell proliferations or

This is the nucleotide sequence of oligonucleotide 1907C, a primer based on a highly conserved region found in the methionine synthases of different organisms. It corresponds to nucleotides 1464-1488 of the human methionine synthase cDNA open reading frame (see AAV34064-104) based on such conserved regions are provided. These have been used for human and mouse methionine synthase cDNA cloning, chromosome mapping and in a claimed method for mutation detection. Mutations in the human methionine synthase gene are associated with hyperhomocysteinaemia. The invention relates to the diagnosis and treament of patients at risk for methionine synthase deficiency, aind associated altered risk for neural tube defects, cardiovascular disease and colon cancer. Claimed methods for detecting sequence variants involve SSCP or RFLP polymorphism analysis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Methionine synthase; human; hyperhomocysteinaemia; neural tube defect; cardiovascular disease; colon cancer; diagnosis; therapy; PCR; primer;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This is the nucleotide sequence of oligonucleotide 1828, a primer based on a highly conserved region found in the methionine synthases of different organisms. It corresponds to nucleotides 1125-1149 of the human methionine synthase cDNA open reading frame (see AAV34063). 41 Primers (see AAV34064-104) based on such conserved regions are provided. These chromosome mapping and in a claimed methionine synthase cDNA cloning, chromosome mapping and in a claimed methionine synthase cDNA cloning, whitetions in the human methionine synthase gene are associated with hyperhomocysteinsemia. The invention relates to the diagnosis and treatment of patients at risk for methionine synthase deficiency, and associated altered risk for methionine synthase deficiency, and associated altered risk for methionine synthase deficiency, and associated altered risk for methionine synthase deficiency, and colon cancer. Claimed methods for detecting sequence variants involve SSCP or RFLP polymorphism analysis
                                                                                                                                                                                                                                                                                          Methionine synthase; human; hyperhomocysteinaemia; neural tube defect; cardiovascular disease; colon cancer; diagnosis; therapy; PCR; primer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DNA encoding methionine synthase polypeptide - and corresponding polypeptide, cells, antibody and therapeutic methods.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

                                                                                                                                                                                                                                                                                                                                                                                                                                            ઠ
                                                                                                                                                                                                                                                                                      This is the nucleotide sequence of oligonucleotide 1907B, a primer based on a highly conserved region found in the methionine synthases of different organisms. It corresponds to nucleotides 2057-2033 of the human methionine synthase cDNA open reading frame (see AAV34064). 41 Primers (see AAV34064-104) based on such conserved regions are provided. These (see AAV34064-104) based on such conserved regions are provided. These chromosome mapping and in a claimed method for mutation detection. Mutations in the human methionine synthase gene are associated with hyperhomocysteinsemia. The invention relates to the diagnosis and treatment of patients at risk for methionine synthase deficiency, and associated altered risk for methionine synthase deficiency, and associated altered risk for methionine synthase deficiency, and associated altered risk for methionine synthase deficiency and associated altered risk for methionine synthase deficiency and associated account of patients are altered risk for methionine synthase deficiency and and colon cancer. Claimed methods for detecting sequence variants involve
                                                                                                                                                                                               encoding methionine synthase polypeptide - and corresponding peptide, cells, antibody and therapeutic methods.
                                                                                                                             Gravel RA;

                                                                                                                                               methiconine synthase conditions reading frame (see AAV34063). If princing methiconine synthase colon such conserved regions are provided. These (see AAV34064-104) based on such conserved regions are provided. These chave been used for human and mouse methionine synthase colon cloning, chromosome mapping and in a claimed method for mutation detection. Mutations in the human methionine synthase gene are associated with hyperhomocysteinaemia. The invention relates to the diagnosis and treatment of patients at risk for methionine synthase deficiency, and associated altered risk for meural tube defects, cardiovascular disease and colon cancer. Claimed methods for detecting sequence variants involve
                                                                                   This is the nucleotide sequence of oligonucleotide 2606A, a primer based on a highly conserved region found in the methionine synthases of different organisms. It corresponds to nucleotides 1078-1054 of the human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           the human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This is the nucleotide sequence of oligonucleotide 1827, a primer based on a highly conserved region found in the methionine synthases of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        different organisms. It corresponds to nucleotides 1657-1633 of the hum methionine synthase CDNA open reading frame (see AAV34063). 41 Primers (see AAV34064-104) based on such conserved regions are provided. These have been used for human and mouse methionine synthase cDNA cloning, chromosome mapping and in a claimed method for mutation detection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Methionine synthase; human; hyperhomocysteinaemia; neural tube defect; cardiovascular disease; colon cancer; diagnosis; therapy; PCR; primer;

This is the nucleotide sequence of oligonucleotide 2706B, a primer based on a highly conserved region found in the methionine synthases of different organisms. It corresponds to nucleotides 3749-3755 of the human methionine synthase cDNA open reading frame (see AAV34064-104) based on such conserved regions are provided. These chave been used for human and mouse methionine synthase cDNA cloning, chromosome mapping and in a claimed method for mutation detection. Mutations in the human methionine synthase gene are associated with hyperhomocysteinaemia. The invention relates to the diagnosis and associated altered risk for neural tube defects, cardiovascular disease and colon cancer. Claimed methods for detecting sequence variants involve
                                                                                                                                                                          ö
hyperhomocysteinaemia. The invention relates to the diagnosis and treatment of patients at risk for methionine synthase deficiency, and sasociated altered risk for neural tube defects, cardiovascular disease and colon cancer. Claimed methods for detecting sequence variants involve SSCP or RFLP polymorphism analysis

```

```
This is the nucleotide sequence of oligonucleotide 1773, a primer based on a highly conserved region found in the methionine synthases of different organisms. It corresponds to nucleotides 2698-2674 of the human methionine synthase CDNA open reading frame (see AAV34064). 41 Primers (see AAV34064-104) based on such conserved regions are provided. These have been used for human and mouse methionine synthase CDNA cloning, chromosome mapping and in a claimed method for mutation detection. Mutations in the human methionine synthase gene are associated with hyperhomocysteinaemia. The invention relates to the diagnosis and associated altered risk for methionine synthase deficiency, and case of concern claimed methods for detecting sequence variants involve

This is the nucleotide sequence of oligonucleotide 1707A, a primer based on a highly conserved region found in the methionine synthases of different organisms. It corresponds to nucleotides 2129-2105 of the human methionine synthase cDNA open reading frame (see AAV34064). 41 Primers (see AAV34064-104) based on such conserved regions are provided. These chave been used for human and mouse methionine synthase cDNA cloning, chromosome mapping and in a claimed method for mutation detection. Mutations in the human methionine synthase gene are associated with readment of patients at risk for methionine synthase deficiency, and associated altered risk for meural tube defects, cardiovascular disease and colon cancer. Claimed methods for detecting sequence variants involve
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; prostate cancer; cytostatic; carcinogen; pharmacodyanamic marker;

This is the nucleotide sequence of oligonucleotide 1406D, a primer based on a highly conserved region found in the methionine synthases of different organisms. It corresponds to nucleotides 2170-2194 of the human methionine synthase cDNA open reading frame (see AAV34063). 41 Primers (see AAV34064-104) based on such conserved regions are provided. These have been used for human and mouse methionine synthase cDNA cloning, chromosome mapping and in a claimed method for mutation detection. Mutations in the human methionine synthase gene are associated with hyperhomocysteinaemia. The invention relates to the diagnosis and treatment of patients at risk for methionine synthase deficiency, and associated altered risk for methionine synthase cardiovascular disease and colon cancer. Claimed methods for detecting sequence variants involve SSCP or RFLP polymorphism analysis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV0010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether projects afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cell carcinogenic potential of a compound; (g) determining whether prostate cancer has metastasized in a patient; (h)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a composition (I) comprising: carriers and immunostimulants; and a polypeptide (II) of a ovarian tumour applyed tide encoded by a polynucleotide (III) having a cDNA sequence (SI) from the 10912 nucleotide sequences as given in ABL/77023 to ABL697934, (III) encoding (II) having a sequence (S2), a T cell population of (II),
                                                                                                                                                                                                                                                                                                                                                   assessing the aggressiveness or indolence of prostate cancer in a patient , (I) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Composition for therapy and diagnosis of ovarian cancer comprising polypeptide of a ovarian tumor polypeptide, polynucleotide encoding polypeptide, antibody specific to polypeptide or T cell expressing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; ovarian cancer; ovarian tumour; cytostatic; gene; ss

or antigen presenting cells that express (II). (I) has cytostatic activity. An oligonucleotide (IV) that hybridises to (SI) can be used for detecting ovarian cancer in a patient's biological sample preferably serum or ovarian tissue. The method comprises contacting a biological sample from a patient with (IV), detecting the amount of polymucleotide hybridising to (IV) and comparing the amount of polymucleotide hybridising to (IV) is detected preferably by amount of polymucleotide hybridising to (IV) is detected preferably by conjumerase chain reaction (PCR). (I) comprising (III) and/or (II) is useful for stimulating and/or expanding T cells specific for an ovarian tumour protein comprising contacting T cells specific for an ovarian cumour protein comprising contacting T cells with (III) or (III) is useful in design and preparation of ribozyme molecules for inhibiting expression of the tumour polypeptides and proteins in tumour cells; and to isolate a full length gene from a suitable library e.g., a tumour conna ö Cotton; plant; EST; expressed sequence tag; transgenic plant; androecium; varitety Nucotton318; library LiB388; molecular tag; molecular marker; genetic mapping; med equality; seed germination; plant growth; plant quality; plant yield; plant breeding; tissue printing; ss. The invention relates to 17880 cotton expressed sequence tags (ESTs; ACN45220-ACN63099). The ESTs were isolated from cDNA libraries generated from primed or non-primed seeds from variety DP50B, mature seeds from variety Coker 312 Boswell 96 Field, and androectium tissue, gynoectum tissue, developing fibres, carpel walls and septa from variety New isolated nucleic acid molecule that encodes a plant protein or its fragment, useful for isolating a variety of agronomically significant genes associated with plant growth, quality or yield, and as molecular Cotton androecium tissue EST Clone ID: LIB3828-018-Q1-N6-F10, SEQ:7632 Gaps ö Query Match 0.6%; Score 25; DB 6; Length 296; Best Local Similarity 100.0%; Pred. Direction by the invention also relates to substantially purified proteins or their fragments encoded by nucleic acid molecules of the invention, and to transformed plants having a nucleic acid construct comprising a nucleic acid of the invention. The cotton ESTs are useful as molecular tags to isolate genetic regions, to isolate genes, to map compared and the plant gene function and to determining whether genes are members of a particular gene family. The nucleic acid molecules may be used for isolating a variety of agronomically significant genes are links in metabolic and catabolic pathways. The nucleic acid molecules are links in metabolic and catabolic pathways. The nucleic acid molecules are seed germination or that may be used to mitigate stresses encountered during seed germination or that may be used to mitigate stresses encountered caring seed germination or the ESTs additionally enable the acquisition of promoters and cis-regulatory elements which will be useful to express and also permits the acquisition of molecular markers useful for schemes, genetic and molecular mapping, and in cloning of agronomically schemes, genetic and molecular mapping, and in cloning of agronomically detecting the expression level or pattern of a protein or mRNA and for detecting the expression level or pattern of a protein or mRNA and for detecting the expression level or pattern of a protein or mRNA and for sequence data for this patent did not form part of the printed from a coutton variety Nucotton33B androecium tissue cDNA library (LIBS28). The present invention describes primer sets for synthesising 5602 full-

[angth cDNAs defined in the specification, Where a primer set comprises:

[a] an oligo-dr primer and an oligonucleotide comprisentary to the

complementary strand of a polynucleotide which comprises one of the 5602

nucleotide sequences defined in the specification, where the

oligonucleotide comprises at least 15 nucleotides; or (b) a combination

of an oligonucleotide comprising a sequence complementary to the

complementary strand of a polynucleotide which comprises a 5'-end

sequence and an oligonucleotide comprising a sequence complementary to a

complementary strand of a polynucleotide which comprises a 5'-end

sequence and an oligonucleotide comprision a sequence, where the

coligonucleotide comprises at least 15 nucleotides and the combination of

the 5'-end sequence[3'-end sequence is selected from those defined in the

coligonucleotide comprises at least 15 nucleotides and the combination of

the 5'-end sequence[3'-end sequence is selected from those defined in the

specification The primer sets can be used in antisense therapy and in

complementarly full-length cDNAs. The primers are also useful for the

contains and/or diagnosis of the abnormality of the proteins encoded by

the full-length cDNAs. The primers allow obtaining of the full-length

contains and/or diagnosis of the abnormality of the proteins encoded by

the full-length cDNAs. The primers allow obtaining of the full-length

contains and/or diagnosis of the abnormality of the proteins encoded by

the full-length cDNAs. The primers allow obtaining of the full-length

contains and/or diagnosis of the abnormality of the proteins encoded by

the full-length cDNAs. The primers allow obtaining of the full-length

contains and/or diagnosis of the abnormality of the proteins encoded by

The present sequence represents a nucleic acid molecule which encodes a secreted human protein. The gene number and the clone it was derived from a regiven in the descriptor line. The invention relates to 31 movel genes and their fragments funcieic acid sequences: AAA61260-A61293, amino acid sequences AAB12301-B12371) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also pathological conditions e.g. by protein or gene therapy. Also pathological conditions can be disagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polypeptides, Specific uses are described for each of the 1 polynucleotides, based on which tissues they are most highly expressed in and include products for the diagnosis or treatment of cancer, tumours, AlDS, autoimmune disorders, allergy, cardiovascular disorders, viral, bacterial and fungal infection. The genes are used to generate fusion proteins by linking to the gene a human immunoglobulin portion (cancer, casion proteins by linking to the gene a human immunoglobulin portion are compared to

```
The invention describes an isolated NEOKINE nucleic acid molecule (I)

comprising a sequence of 1656, 300, 1372, 237, 1458 or 285 bp given in

the specification (designated $1-86, respectively) or their complements.

The NEOKINE molecules are useful as modulating agents in regulating a

variety of cellular processes, as primers or hybridisation probes for the

catection of NEOKINE-encoding nucleic acids, in screening assays, in

predictive medicine (e.g. diagnostic assays, prognostic assays, in

predictive medicine (e.g. diagnostic assays, prognostic assays, in

cateaument (therapeutic or prophylactic). The nucleic acids are useful in

chromosome mapping, tissue typing, and in forensic biology. The proteins

can be used to treat disorders characterised by insufficient or excessive

production of non-NEOKINE chemokine or chemokine forms which have

car be read activity compared to wild type chemokines, and to

screen drugs or compounds which modulate NEOKINE activity. NEOKINE

modulators are useful for treating and/or preventing proliferative

classases such as cancers of the epithelia, liver, secretory glands,

classases such as cancers of the epithelia, liver, secretory glands,

classues, inflammation, psoriaais, or immune rejection following skin

graft or kidney transplant, and brain inflammation following skin

graft or kidney transplant, and brain inflammation following skin

graft or kidney transplant, and brain inflammation following skin
New NEOKINE polypeptides and nucleic acids, useful as modulating agents in regulating a variety of cellular processes, in chromosome mapping, tissue typing, and in forensic biology.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence encodes the human orphan
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ischaemia or viral infection. This sequence encodes the human orpl
chemokine receptor RDC1 that functions as a receptor for NOEKINEs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 2050 BP; 435 A; 578 C; 507 G; 530 T; 0 U; 0 Other;

/product= "NEOKINE-1 receptor RDC1 protein"

```
The invention relates to NEOKINE proteins and their corresponding nucleic acid sequences. The nucleic acid molecules, polypeptides and antibodies of the invention are useful for diagnosing and treating NEOKINE-casociated disorders, such as genetic disorders of the membrane transport (aminoacidurias, cystinosis), CNS disorders (Alzheimer's disease, cystinosis), CNS disorders (Alzheimer's disease, cystinosis), CNS disorders, skeletal muscle disorders, cellular proliferative and/or differentiative disorders (cancer), hormonal disorders (disorders, thyroid disorders), immune and contropascular disorders (incutropascular disorders), cardiovascular disorders (lasorders, neutrophil disorders (neutropascular disorder (mumps) and platelet disorders. They are also useful in tissue typing, detection assays, and predictive medicine. The nucleic acids are useful as surrogate markers and also useful in gene therapy. The present sequence is human NEOKINE-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                        useful for
                                                                                                                                                                                                                                                                                                                                    New isolated nucleic acid molecules encoding NEOKINE proteins, useful diagnosing and treating kinase-associated disorders, such as diabetes, Alzheimer's disease, aminoacidurias.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  0.6%; Score 25; DB 12; Length 2050;

nervous system antigen polypeptides, and/or treating nervous system cancers

```
The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tisques disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and covarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infections. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic formet directly
                                                                                                                          Disclosure; SEQ ID NO 12082; 1701pp + Sequence Listing; English

for diagnosing, preventing or treating cancers, especially lymphoma and leukemia, or in screening for agents that modulate cancer. New isolated cancer-associated polynucleotides and polypeptides useful

variation

The invention relates to an isolated nucleic acid comprising at least 10 in the specification, or its complement. The nucleic acids encode cancerassociated proteins. Also included are an expression vector comprising the isolated proteins. Also included are an expression vector comprising the isolated nucleic acid cited above, a host cell comprising the above cancerassociated (CA) nucleic acid comprising at least one probe comprising at least 10 contiguous nucleotides of any of the above mentioned nucleotide sequences an elected from any of the above mentioned nucleotide sequences an entitloned in the specification, or its polymucleotide sequences an entitloned in the specification, or its complement), an isolated antibody, or its antigen binding fragment) that binds to the above polypeptide, a hybridoma that produces the above antibody and a pharmaceutical composition comprising the above antibody and a pharmaceutical excipient, a kit for detecting cancer colls (comprising the presence or absence of cancer cells in an individual, a method for inhibiting growth of cancer cells in an individual, a method for their fragments), methods of screening contractive activity of a captorial (CAP), methods for detecting cancer colls in an individual, an electronic library comprising the above in an individual, an electronic library comprising the above contractive activity of a captorial (CAP), methods for detecting cancer activity or for a bloactive agent capable of modulating the activity of a captorial (CAP), methods for detecting cancer activity or for a bloactive agent capable of modulating cancer activity or for a bloactive agent capable of modulating cancers and a method for inhibiting the expression of a polypeptide in a test cell sample. The semplement sequence and a method for inhibiting the expression of a polypeptide in a test cell sample. Captorial cancer and a method for inhibiting cancer and a method for Sequence 142976 BP; 35484 A; 31242 C; 34145 G; 42085 T; 0 U; 20 Other; at ftp.wipo.int/pub/published\_pct\_sequences claim 16; seqid 125; 310pp; English. %XCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCC

The invention relates to a method of determining susceptibility of an individual to joint space narrowing and/or esteophyte development and/or joint pain comprising identifying whether the individual has at least one polymorphism in a polymorlectide encoding at least one of the protein listed in the specification. The methods, composition and agent are useful for modulating the susceptibility of an individual to joint space narrowing and/or osteophyte development and/or joint pain that is associated with a disease, preferably osteoarthritis. The cell line and the non-human animal are useful for screening for an agent for diagnosing an individual having susceptibility to joint space narrowing and/or osteophyte development and/or joint pain. This sequence corresponds to the polymorlectide encoding a protein listed in the specification. (Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This is the nucleotide sequence of oligonucleotide 1107A, a primer based on a highly conserved region found in the methionine synthases of different organisms. It corresponds to nucleotides 3856-3833 of the human methionine synthase cDNA open readines (see AAV34064-104) based on such conserved regions are provided. These have been used for human and mouse methionine synthase cDNA cloning,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Methionine synthase; human; hyperhomocysteinaemia; neural tube defect; cardiovascular disease; colon cancer; diagnosis; therapy; PCR; primer;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This is the nucleotide sequence of oligonucleotide 1706A, a primer based on a highly conserved region found in the methionine synthases of different organisms. It corresponds to nucleotides 1963-1986 of the human methionine synthase CDNA down reading frame (see AAV34064). 41 Primers (see AAV34064-104) based on such conserved regions are provided. These have been used for human and mouse methionine synthase CDNA choning, chromosome mapping and in a claimed method for mutation detection. Mutations in the human methionine synthase gene are associated with hyperhomocysteinaemia. The invention relates to the diagnosis and treatment of patients at risk for methionine synthase deficiency, and associated altered risk for methionine synthase deficiency, and associated altered risk for methionine synthase deficiency, and associated altered risk for methionine synthase deficiency and associated altered risk for neural tube defects, cardiovascular disease and colon cancer. Claimed methods for detecting sequence variants involve
chromosome mapping and in a claimed method for mutation detection. Mutations in the human methionine synchase gene are associated with hyperhomocysteinaemia. The invention relates to the diagnosis and treatment of patients at risk for methionine synthase deficiency, and associated altered risk for neural tube defects, cardiovascular disease and colon cancer. Claimed methods for detecting sequence variants involve SSCP or RFLP polymorphism analysis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Methionine synthase; human; hyperhomocysteinaemia; neural tube defect; cardiovascular disease; colon cancer; diagnosis; therapy; PCR; primer;

It corresponds to nucleotides 3241-3264 of the human methionine synthase cDNA open reading frame (see AAV34064). 41 Primers (see AAV34064-104) based on such conserved regions are provided. These have been used for human and mouse methionine synthase cDNA cloning, chromosome mapping and in a claimed method for mutation detection. Mutations in the human methionine synthase gene are associated with hyperhomocygteingemia. The invention relates to the diagnosis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       treatment of patients at risk for methionine synthase deficiency, and associated altered risk for neural tube defects, cardiovascular disease and colon cancer. Claimed methods for detecting sequence variants involve
